# ABOUT ISPPD

The Indian Society of Pedodontics and Preventive Dentistry (ISPPD) is a national professional organization exclusively dedicated to the promotion, preservation, and advancement of oral health among children in India. The Society strives to improve the oral health status of children while encouraging the highest standards of clinical care, education, and research in the specialty of pediatric dentistry. With a strong academic foundation and a membership comprising over 2000 pediatric dentists as life members, ISPPD stands as the apex body representing specialists committed to child oral health care in the country.

ISPPD is founded on the firm and enduring belief that “Every child in India has a fundamental right to total oral health.” This guiding principle places a moral, ethical, and professional obligation on all members of the dental profession, particularly pedodontists, to uphold and safeguard this right. The Society assumes a solemn responsibility toward the maintenance of positive dental health in children through preventive strategies, early diagnosis, parental education, and active community involvement. Through its initiatives, ISPPD endeavours to provide an appropriate platform to honor and fulfil its sacred commitment toward ensuring healthy smiles for every child.

The emblem of ISPPD is rich in scientific and symbolic significance and is based on the Keyes' Triad (1960), which illustrates the multifactorial etiology of dental caries. The three intersecting circles represent tooth, bacteria, and diet, and the shaded area of intersection signifies dental caries, emphasising that all three factors are essential for its development. The intersecting area forms a triangular shape that represents delta ( $\Delta$ ), the symbol of dentistry, and also depicts the pedodontic triangle described by Wright (1975). The three corners of this triangle signify the child, parent, and dentist, highlighting the essential 1:2 transactional relationship required for effective pediatric dental care.

The upper portion of the emblem incorporates elements of the Indian Dental Association (IDA) symbol, including the Staff of Aesculapius with two serpents entwined in opposite directions and wings at the top. Together, these elements reflect the Society's commitment to professional excellence, ethical practice, and continuous learning.

Pedodontics & Preventive Dentistry, as a specialty, focuses on providing comprehensive oral health care to children from infancy through adolescence (up to 14 years of age), with a strong emphasis on prevention, early intervention, behaviour guidance, and parental counselling. ISPPD welcomes a diverse membership, including student, honorary, and life members, fostering unity, collaboration, and shared responsibility among professionals dedicated to shaping a healthier future for the children of India.

## MESSAGE FROM COMMISSIONER OF POLICE

It is a matter of immense pride and satisfaction that 22<sup>nd</sup> National Postgraduate Convention (ISPPD Convene 2026) is being organized by Anil Neerukonda Institute of Dental Sciences at Visakhapatnam from 12<sup>th</sup> to 14<sup>th</sup> March, 2026. Artificial Intelligence is bestriding over the world of today's science like a colossus. Not a single discipline of medical science remains untouched by artificial intelligence (AI) and pedodontics is no exception. Artificial Intelligence powered by digital tools has the potential to transform pediatric dental care. Artificial Intelligence can help in detecting early childhood caries, malocclusion, tooth eruption problems and dental trauma. AI can analyze dental X-rays to identify early cavities that may be missed by dentists, Which child has high predilection for developing dental ailments can be predicted by AI models based on diet, socioeconomic factors and oral hygiene habits. AI can predict timing of tooth eruption, monitor jaw growth and assist in orthodontic planning. By analyzing facial expression and behavioral data, AI tools can help in managing tooth-related anxiety in children. Parents can upload photographs of the teeth of their children in AI powered mobile apps pertaining to oral health and can receive risk alerts and track brushing habits of their children. AI radiograph analysis software, AI orthodontic prediction systems and AI analytics for electronic health records exemplify the meteoric rise in the use of AI in oral health care of children. In a nutshell, AI enables early detection, personalized care and better preventive strategies in pediatric dentistry.

It is no wonder that the ensuring convention which will witness the participation of nearly 1500 delegates including distinguished academicians, postgraduate students, researchers and practitioners from across the country and abroad will facilitate sharing of experience while honouring the skills of young dentists in improving children's oral health outcomes through digital means.

I wish the organizers and delegates all the best and wish the convention a grand success.

As we gather here, we are not merely attending a scientific meeting; we are participating in a significant intellectual exchange that defines the future trajectory of pediatric oral healthcare in India.

For our postgraduate residents, this convention represents a transformative threshold. You are the architects of the next generation of pediatric dental care. In a rapidly evolving pedagogical landscape, your role transcends the traditional boundaries of restorative dentistry. Today's speciality demands a holistic synthesis of advanced pharmacological guidance for behaviour, minimally invasive therapeutic interventions, and an unwavering commitment to preventive public health initiatives. The knowledge you acquire and the clinical insights you exchange during these few days will become the bedrock of your professional lives.

As we strive to uphold the "Gold Standard" of pediatric care, it is imperative that we remain grounded in evidence-based research. The work you present here is a testament to your dedication to intellectual rigour. I encourage you to use this forum to challenge conventional methodologies, engage in spirited academic debate, and collaborate with your peers to forge a stronger, more unified community.
